# STRAUMANN® SURGICAL MOTOR PRO

## STRONG

- A robust motor with maximum torque value of 80 Ncm, suitable for all Straumann implant types
- 2 year warranty on control unit and micromotor

## SIMPLE

- Large display with all information on one screen
- Natural daylight LED illumination
- Memory for 8 implant protocols
- User-friendly foot control allowing operation of all functions within the preset parameters without touching the control panel

## SAFE

- “Torque limiter” stops the motor when the working torque reaches the preset torque value
- “Torque calibration” ensures accurate torque output for any contra-angle handpiece

“Torque calibration” ensures accurate torque output for any contra-angle handpiece.
Equipped with a mechanical torque calibration system. Because every single motor, motor cord and contra-angle has a different level of power transmission due to repeated autoclaving, disinfections and age, mechanical torque calibration is essential for correct torque output.

“Torque limiter” triggered when the working torque reaches the preset torque value. During use, when the drilling load reaches the preset torque upper limit, the integrated torque limiter automatically stops the motor to prevent over-torque. To reactivate the micromotor, simply release the speed control pedal and press it again.
